About American Facility Services

American Facility Services is into providing maintenance services primarily to cater to the needs of maintenance requirements of shopping centers, malls, office buildings, industrial warehousing, apartment complexes and government municipalities.

Project Requirement

The client required a well designed website with an engaging layout and easy navigation. The site was to be a database-driven dynamic website where the client could effortlessly make changes.

The Challenge

Flash: Effective and judicious use of Flash to create an attractive layout.

Advanced CMS Integration: The client wanted to be able to regularly update the content, which required CMS integration.

Database-driven Website: The client wanted to fetch data from a database and update the database when required through the website's backend.

Our Solution

We designed for the client a simple yet attractive website that is database-driven. The images and appropriate use of colour drives the attention of online customers. Our professionals integrated the site with a user friendly CMS thus allowing the client to make changes as and when desired.

Key Features

- Database-driven dynamic website
- Admin panel for making routine changes to the website
- Use of appealing graphics
- Flash banners at appropriate places
- Attractive and engaging layout
- Advanced CMS integration that can be used to upload a multimedia file from database using the Admin Panel
