# CourtEasy

[www.courteasy.com](http://www.courteasy.com)

## About CourtEasy

CourtEasy is an online facilitation tool designed to streamline the litigation process by removing the burden on Court's time and the client's resources and costs. The site promotes communication between litigants, enabling users to discuss the merits of a litigation matter or schedule depositions, resolving as many differences as possible before going to court or avoiding a court hearing entirely.

## Project Requirement

The client required an effective web solution that had the capacity to showcase its entire range of services in the best possible manner. They also required a secure payment gateway so that clients could make payment with ease.

## The Challenge

**Look and Feel:** One of the key requirements was an appealing design, which also needed to be inline with the concept of the website.

**Payment Gateway:** Another key requirement was incorporation of payment gateway so that user could pay online for the services availed.

**Complexity:** The requirements for the website were complex in nature and demanded more than usual programming effort.

## Our Solution

RiaEnjolie fulfilled the exact requirements by creating a simple yet elegant looking website using PHP, HTML and XML. The website has a high visually appealing look and feel. RiaEnjolie provided an engaging dynamic database-driven website with a payment gateway facility to enable online payments.

## Key Features

- Database-driven dynamic website
- Admin panel for making routine changes to the website
- Visually appealing website design in line with the website concept
- Facility to pay online through payment gateway
